

- Spearheaded the migration of the Identity Management monolith to a microservices architecture, keeping the service live for users throughout the transition.
- Owned the container strategy for two squads as Docker champion, building and hardening the images and keeping them aligned with security and tooling standards.

- Designed from scratch a cloud-native, clustered CQRS/event-driven microservices backend on Vert.x, built for high throughput and low latency.
- Ran the platform on Kubernetes and GCP, supporting **hundreds of thousands** of concurrent interactions, with Prometheus/Grafana monitoring for availability.
- Designed the CI/CD pipelines (CircleCI to GCP) the team shipped through.

■ WHAT COLLEAGUES SAY

“His ability to solve complex technical challenges and deliver scalable solutions in such a demanding environment reflects a deep understanding of modern software engineering practices.” — Matteo Castellarin, Lead Dev/Systems Engineer, SWIFT DevOps Engineering Services, 2026	“He does not merely automate tasks; he engineers repeatable, resilient delivery systems that improve deployment reliability, enforce secure coding standards and reduce operational risk.” — Anastasios Lagos, DevSecOps Engineer, Mindwave (SWIFT programme), 2026
