

■ PROFILE

Senior Backend Engineer building and modernising large-scale, high-availability Java systems in finance, payments and media: a monolith-to-microservices migration at SWIFT, an event-driven Kafka/Vert.x platform on Kubernetes, and a 2.5 billion-record migration to Oracle without loss of integrity. Owns CI/CD and security as part of the job, not as someone else's problem.

17+

years in software engineering

2.5bn

financial records migrated to Oracle

40+

Java apps on zero-touch release orchestration

100k+

concurrent users on a Kafka/Vert.x platform

■ CORE SKILLS

|                         |                                 |                              |                                     |                            |                           |                 |         |
|-------------------------|---------------------------------|------------------------------|-------------------------------------|----------------------------|---------------------------|-----------------|---------|
| Backend                 | Java 8–17                       | Spring Boot / Security / Web | Vert.x                              | REST                       | GraphQL                   | JPA / Hibernate | JUnit 5 |
|                         | TDD / BDD                       |                              |                                     |                            |                           |                 |         |
| Architecture            | Microservices                   | Event-driven / CQRS          | Apache Kafka                        | Hazelcast clustering       |                           |                 |         |
|                         | API gateways (Kong, Ambassador) | SOLID & clean code           | Secure coding                       |                            |                           |                 |         |
| Cloud & Data            | AWS (EC2)                       | Google Cloud Platform        | Oracle                              | PostgreSQL                 | SQL tuning & partitioning | Liquibase       |         |
|                         | Prometheus / Grafana            |                              |                                     |                            |                           |                 |         |
| DevSecOps & CI/CD       | CloudBees CI (expert)           | CloudBees CD/RO (expert)     | Jenkins                             | CircleCI                   | SAST / DAST / SCA gates   |                 |         |

| Frontend                | Angular 10–16                   | TypeScript                   | React (basics)                      |                            |                           |                 |         |

- EXPERIENCE
- DevSecOps Architect (Customer Success Architect)** (Consultant) · **SWIFT**, Brussels, Belgium

Jan 2025 – Present

*Returned to SWIFT in 2025 for the DevOps Engineering Services organisation: a regulated, multi-squad platform behind global secure financial messaging.*

  - Onboarded **40+** Java applications onto a centralised Release Orchestration platform (CloudBees CD/RO) for zero-touch deployment from commit to production.
  - Designed the CI/CD pipeline blueprints that **5+** engineering squads build and ship with.
  - Built **20+** orchestrated-patching pipelines covering 300+ VMs, cutting patching time by 40% and making patch cycles repeatable enough that teams trust them; core of the company KPI for 100% orchestrated VM patching.
  - Integrated SAST/DAST scanning into the standard pipelines of several critical applications, turning security findings into enforced gates in the secure SDLC.

Stack CloudBees CI · CloudBees CD/RO · SAST / DAST · Ansible Automation Platform · Docker · Java / Maven · Node.js · Linux · Shell scripting · Bitbucket / Jira
- Senior Software Engineer** (Consultant) · **Swissquote**, Geneva, Switzerland (hybrid)

Jul 2024 – Dec 2024

*Swiss online bank; regulated, high-availability financial environment.*

  - Led the migration of a **2.5 billion-record** financial database to Oracle, preserving data integrity and business continuity throughout.
  - Built a high-performance Java data loader that moved **2.5 billion records** between databases without disrupting consumers.
  - Improved database performance through query refactoring, denormalisation and table partitioning.

- Produced migration reports and technical documentation that DBA and engineering squads used for decisions and risk mitigation.

Stack Java · Spring · Oracle · SQL · Linux

**Senior Software Engineer** (Consultant) · **SWIFT**, Brussels, Belgium

Jul 2019 – Jun 2024

*Three squads over five years: Identity Management, Community Gateway and Knowledge Channels.*

- Spearheaded the migration of the Identity Management monolith to a microservices architecture, keeping the service live for users throughout the transition.
- Led the JSF-to-Angular migration of the same platform, a delivery tied directly to a key business KPI.
- Docker champion for two squads: built and maintained the container images the applications ship in.
- Hardened multiple back-office applications by remediating security vulnerabilities and code-quality findings.

Stack Java 11 / 17 · Spring Boot · Angular 16 · Docker / Compose · AWS EC2 · Jenkins · Ansible · REST · Coveo · Adobe Experience Manager

**Tech Lead & Senior Software Engineer** · **Eleven Sports (MyCujoo)**, Lisbon, Portugal

Jun 2018 – Jun 2019

*Sports media group (premium TV channels and OTT); first backend engineer on the player-experience platform, reporting to the CTO.*

- Designed from scratch a cloud-native, clustered CQRS/event-driven microservices backend on Vert.x, built for high throughput and low latency.
- Architected a real-time fan-engagement platform on Kafka enabling live, social-network-style interaction between football players and their fans.
- Ran the platform on Kubernetes and GCP, supporting **hundreds of thousands** of concurrent interactions, with Prometheus/Grafana monitoring for availability.

Stack Java 9 · Vert.x · Kafka · Kubernetes · Google Cloud Platform · Vault · Hazelcast · Kong / Ambassador · GraphQL · CircleCI · Prometheus / Grafana

## ■ OPEN FRAMEWORKS

Frameworks published under Techstream, my consultancy — [github.com/sotille](https://github.com/sotille).

**Secure CI/CD Reference Architecture** — reference architectures for secure pipelines, cloud-native and enterprise  
**Release Orchestration Framework** — deployment governance and controlled delivery across environments

## ■ WHAT COLLEAGUES SAY

“The go-to man when it comes to Linux and microservices.”

— Sadhana Italiya, Java Software Engineer, SWIFT

“He does not merely automate tasks; he engineers repeatable, resilient delivery systems that improve deployment reliability, enforce secure coding standards and reduce operational risk.”

— Anastasios Lagos, DevSecOps Engineer, Mindwave (SWIFT programme), 2026
