

■ PROFILE

DevSecOps architect and coach for regulated, high-availability platforms (SWIFT, Swissquote). I design the release-orchestration and security standards that squads ship through, then coach 5+ squads until the standard holds: golden-path pipelines, SBOM, policy-as-code and DORA-aligned controls. I still ship code: Java 21, Spring, Vert.x and Kafka on regulated platforms, and I govern coding agents (Claude Code, Codex, Devin) with the same gates as human-written code.

“A technical reference and mentor for multiple engineering teams, frequently sought out for guidance on secure software delivery and release orchestration.” — Sudhir Indurti, Lead DevOps Engineer, SWIFT, 2026

■ EXPERIENCE

**DevSecOps Architect (Customer Success Architect)** (Consultant) · **SWIFT**, Brussels, Belgium Jan 2025 – Present  
Returned to SWIFT in 2025 for the DevOps Engineering Services organisation: a regulated, multi-squad platform behind global secure financial messaging.

- Onboarded 40+ Java applications onto the centralised Release Orchestration platform (CloudBees CD/RO) with zero-touch deployment from commit to production; my team delivered 80%+ of the company-level KPI to move 100% of applications to zero-touch.
- Designed the CI/CD blueprints (golden paths) every onboarded squad ships through and coached 5+ squads as DevSecOps solutions architect: enterprise patterns, delivery standards and the technical reference for secure delivery.
- Built 20+ orchestrated-patching pipelines covering 300+ VMs, cutting patching time by 40% and making patch cycles repeatable enough that teams trust them; core of the company KPI for 100% orchestrated VM patching.
- Integrated SAST/DAST scanning into the standard pipelines of several critical applications, turning security findings into enforced gates in the secure SDLC.
- Added SBOM generation and policy-as-code guardrails to the standard pipelines, giving supply-chain visibility and enforceable controls aligned with DORA's ICT-risk and resilience requirements.
- Built the automation and internal tooling in Java, Node.js and shell that improved developer experience, pipeline reliability and day-to-day operational efficiency.
- Set the governance discipline for coding-agent work, scoped tasks, human review and the same security gates as human-written code, and shipped agent-first with Claude Code, OpenAI Codex and Devin.

Senior Software Engineer (Consultant) · **Swissquote**, Geneva, Switzerland (hybrid)

Jul 2024 – Dec 2024

*Swiss online bank; regulated, high-availability financial environment.*

- Led the migration of a 2.5 billion-record financial database to Oracle, preserving data integrity and business continuity throughout.

Senior Software Engineer (Consultant) · **SWIFT**, Brussels, Belgium

Jul 2019 – Jun 2024

*Three squads over five years: Identity Management, Community Gateway and Knowledge Channels.*

- Spearheaded the migration of the Identity Management monolith to a microservices architecture, keeping the service live for users throughout the transition.
- Owned the container strategy for two squads as Docker champion, building and hardening the images and keeping them aligned with security and tooling standards.

Tech Lead & Senior Software Engineer · **Eleven Sports**, Lisbon, Portugal

Jun 2018 – Jun 2019

*Sports media group (premium TV channels and OTT); first backend engineer on the player-experience platform, reporting to the CTO.*

- Designed from scratch a cloud-native, clustered CQRS/event-driven microservices backend on Vert.x, built for high throughput and low latency.
- Ran the platform on Kubernetes and GCP, supporting **hundreds of thousands** of concurrent interactions, with Prometheus/Grafana monitoring for availability.
- Designed the CI/CD pipelines (CircleCI to GCP) the team shipped through.
