## Profile

Principal DevSecOps Architect and founder of Techstream. Designs secure delivery for regulated, high-availability platforms (SWIFT, Swissquote): release orchestration, golden-path pipelines, SBOM, policy-as-code and DORA-aligned controls, then coaches squads and leadership until the standard holds. Publishes open frameworks on release governance, supply-chain security and DevSecOps maturity; governs coding agents (Claude Code, Codex, Devin) with the same gates as human-written code.

17+

years in software engineering

40+

Java apps on zero-touch release orchestration

300+

VMs on orchestrated patching, 40% faster

2.5bn

financial records migrated to Oracle

## Core skills

|                         |                                                                                                                                                                                                                                              |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DevSecOps & CI/CD       | CloudBees CI (expert), CloudBees CD/RO (expert), Jenkins, CircleCI, SAST / DAST / SCA gates, SBOM & supply-chain security, Policy as code, Platform engineering (golden paths), Secure SDLC, Ansible Automation Platform, Docker, Kubernetes |
| Governance & compliance | DORA (EU Digital Operational Resilience Act), Deployment governance                                                                                                                                                                          |
| Ways of working         | Scrum Master practice, Technical leadership & mentoring, DevSecOps coaching, Standards & enterprise-pattern adoption                                                                                                                         |
| AI-assisted engineering | Claude Code, OpenAI Codex, Devin, Governed agentic workflows, AI-assisted code review                                                                                                                                                        |
| Architecture            | Microservices, Event-driven / CQRS, Apache Kafka, Hazelcast clustering                                                                                                                                                                       |
| Cloud & Data            | AWS (EC2), Google Cloud Platform, Oracle, PostgreSQL                                                                                                                                                                                         |

## Experience

**DevSecOps Architect (Customer Success Architect), SWIFT** · Brussels, Belgium · Consultant Jan 2025 – Present  
*Returned to SWIFT in 2025 for the DevOps Engineering Services organisation: a regulated, multi-squad platform behind global secure financial messaging.*

- Onboarded 40+ Java applications onto the centralised Release Orchestration platform (CloudBees CD/RO), zero-touch from commit to production; my team delivered 80%+ of the company KPI for 100% zero-touch.
- Designed the CI/CD blueprints (golden paths) every onboarded squad ships through; coached 5+ squads as DevSecOps solutions architect and technical reference for secure delivery, enterprise patterns and standards.
- Built 20+ orchestrated-patching pipelines covering 300+ VMs, cutting patching time by 40% and making patch cycles repeatable enough that teams trust them; core of the company KPI for 100% orchestrated VM patching.
- Integrated SAST/DAST scanning into the standard pipelines of several critical applications, turning security findings into enforced gates in the secure SDLC.
- Added SBOM generation and policy-as-code guardrails to the standard pipelines, giving supply-chain visibility and enforceable controls aligned with DORA's ICT-risk and resilience requirements.
- Built the automation and internal tooling in Java, Node.js and shell that improved developer experience, pipeline reliability and day-to-day operational efficiency.

**Senior Software Engineer, Swissquote** · Geneva, Switzerland (hybrid) · Consultant Jul 2024 – Dec 2024  
*Swiss online bank; regulated, high-availability financial environment.*

- Led the migration of a 2.5 billion-record financial database to Oracle, preserving data integrity and business continuity throughout.
- Produced migration reports and technical documentation that DBA and engineering squads used for decisions and risk mitigation.

- Spearheaded the migration of the Identity Management monolith to a microservices architecture, keeping the service live for users throughout the transition.
- Owned the container strategy for two squads as Docker champion, building and hardening the images and keeping them aligned with security and tooling standards.

- Designed from scratch a cloud-native, clustered CQRS/event-driven microservices backend on Vert.x, built for high throughput and low latency.
- Ran the platform on Kubernetes and GCP, supporting **hundreds of thousands** of concurrent interactions, with Prometheus/Grafana monitoring for availability.
- Designed the CI/CD pipelines (CircleCI to GCP) the team shipped through.

## Open frameworks & writing

Frameworks published under Techstream, my consultancy — [github.com/sotille](https://github.com/sotille).

[DevSecOps Maturity Model](#) — assess and guide organisations towards secure software delivery

[Release Orchestration Framework](#) — deployment governance and controlled delivery across environments

[Software Supply Chain Security Framework](#) — dependencies, build systems, artifacts and deployment environments

[AI DevSecOps Framework](#) — securing AI-assisted and agentic software delivery

## What colleagues say

“His ability to solve complex technical challenges and deliver scalable solutions in such a demanding environment reflects a deep understanding of modern software engineering practices.”

— Matteo Castellarin, Lead Dev/Systems Engineer, SWIFT DevOps Engineering Services, 2026

“A technical reference and mentor for multiple engineering teams, frequently sought out for guidance on secure software delivery and release orchestration.”

— Sudhir Indurti, Lead DevOps Engineer, SWIFT, 2026
