Profile

Senior Backend Engineer building and modernising large-scale, high-availability Java systems in finance and media: a monolith-to-microservices migration at SWIFT, an event-driven Kafka/Vert.x platform on Kubernetes, and a 2.5 billion-record migration to Oracle without loss of integrity. Owns CI/CD and security as part of the job, not as someone else's problem.

17+

years in software
engineering

2.5bn

financial records
migrated to Oracle

40+

Java apps on zero-touch
release orchestration

100k+

concurrent users on a
Kafka/Vert.x platform

Core skills

Backend	Java 8–21, Spring Boot / Security / Web, Vert.x, REST, GraphQL, JPA / Hibernate, JUnit 5, TDD / BDD
Architecture	Microservices, Event-driven / CQRS, Apache Kafka, Hazelcast clustering, API gateways (Kong, Ambassador), SOLID & clean code, Secure coding
Cloud & Data	AWS (EC2), Google Cloud Platform, Oracle, PostgreSQL, SQL tuning & partitioning, Liquibase, Prometheus / Grafana
DevSecOps & CI/CD	CloudBees CI (expert), CloudBees CD/RO (expert), Jenkins, CircleCI, SAST / DAST / SCA gates, SBOM & supply-chain security, Policy as code, Platform engineering (golden paths)
AI-assisted engineering	Claude Code, OpenAI Codex, Devin, Governed agentic workflows, AI-assisted code review
Frontend	Angular 10–16, TypeScript, React (basics)

Experience

DevSecOps Architect (Customer Success Architect), SWIFT · Brussels, Belgium · Consultant Jan 2025 – Present
Returned to SWIFT in 2025 for the DevOps Engineering Services organisation: a regulated, multi-squad platform behind global secure financial messaging.

- Onboarded **40+** Java applications onto a centralised Release Orchestration platform (CloudBees CD/RO) for zero-touch deployment from commit to production.
- Designed the CI/CD pipeline blueprints that **5+** engineering squads build and ship with.
- Built **20+** orchestrated-patching pipelines covering 300+ VMs, cutting patching time by 40% and making patch cycles repeatable enough that teams trust them; core of the company KPI for 100% orchestrated VM patching.
- Integrated SAST/DAST scanning into the standard pipelines of several critical applications, turning security findings into enforced gates in the secure SDLC.

Stack: CloudBees CI · CloudBees CD/RO · SAST / DAST · Ansible Automation Platform · Docker · Java / Maven · Node.js · Linux · Shell scripting · Bitbucket / Jira

Senior Software Engineer, Swissquote · Geneva, Switzerland (hybrid) · Consultant Jul 2024 – Dec 2024
Swiss online bank; regulated, high-availability financial environment.

- Led the migration of a **2.5 billion-record** financial database to Oracle, preserving data integrity and business continuity throughout.
- Built a high-performance Java data loader that moved **2.5 billion records** between databases without disrupting consumers.
- Improved database performance through query refactoring, denormalisation and table partitioning.
- Produced migration reports and technical documentation that DBA and engineering squads used for decisions and risk mitigation.

Stack: Java 21 · Spring · Oracle · SQL · Linux

- Spearheaded the migration of the Identity Management monolith to a microservices architecture, keeping the service live for users throughout the transition.
- Led the JSF-to-Angular migration of the same platform, a delivery tied directly to a key business KPI.
- Docker champion for two squads: built and maintained the container images the applications ship in.
- Hardened multiple back-office applications by remediating security vulnerabilities and code-quality findings.

Stack: Java 11 / 17 · Spring Boot · Angular 16 · Docker / Compose · AWS EC2 · Jenkins · Ansible · REST · Coveo · Adobe Experience Manager

Tech Lead & Senior Software Engineer, Eleven Sports (formerly MyCujoo) · Lisbon, Portugal

Jun 2018 – Jun 2019

Sports media group (premium TV channels and OTT); first backend engineer on the player-experience platform, reporting to the CTO.

- Designed from scratch a cloud-native, clustered CQRS/event-driven microservices backend on Vert.x, built for high throughput and low latency.
- Architected a real-time fan-engagement platform on Kafka enabling live, social-network-style interaction between football players and their fans.
- Ran the platform on Kubernetes and GCP, supporting hundreds of thousands of concurrent interactions, with Prometheus/Grafana monitoring for availability.

Stack: Java 9 · Vert.x · Kafka · Kubernetes · Google Cloud Platform · Vault · Hazelcast · Kong / Ambassador · GraphQL · CircleCI · Prometheus / Grafana

Open frameworks

Frameworks published under Techstream, my consultancy — github.com/sotille.

[Secure CI/CD Reference Architecture](#) — reference architectures for secure pipelines, cloud-native and enterprise
[Release Orchestration Framework](#) — deployment governance and controlled delivery across environments

Earlier experience

Senior Java Developer, WPLEX · public transport · Brazil	2015 – 2018
Java Developer, Metaway · public sector · Brazil	2015
Java Developer, Città · public management · Brazil	2010 – 2014
Junior Java Developer, Allcance (formerly Holma Software) · industry · Brazil	2008 – 2009

Education & certifications

Universidade de Passo Fundo (UPF) · Brazil	
Postgraduate diplomas, Cloud Security & Smart Contracts and AI & Data Science	2023
B.Sc. Computer Science	2016
CNCF / Linux Foundation	
Certified Kubernetes Security Specialist (CKS) and Administrator (CKA) · in progress	2026

Languages

Portuguese	Native
English	Fluent
French	B1 · intermediate

What colleagues say

“The go-to man when it comes to Linux and microservices.”
– Sadhana Italiya, Java Software Engineer, SWIFT

“He does not merely automate tasks; he engineers repeatable, resilient delivery systems that improve deployment reliability, enforce secure coding standards and reduce operational risk.”
– Anastasios Lagos, DevSecOps Engineer, Mindwave (SWIFT programme), 2026
