## Profile

DevSecOps architect and hands-on engineer for regulated, high-availability platforms (SWIFT, Swissquote). I design the release-orchestration and security standards that squads ship through, then coach 5+ squads until the standard holds: golden-path pipelines, SBOM, policy-as-code and DORA-aligned controls. I still ship code (Java tooling at SWIFT); before that, Java 21 and Spring at Swissquote, Vert.x and Kafka at scale. I govern coding agents (Claude Code, Codex, Devin) with the same gates as human-written code.

“A technical reference and mentor for multiple engineering teams, frequently sought out for guidance on secure software delivery and release orchestration.”

– Sudhir Indurti, Lead DevOps Engineer, SWIFT, 2026

17+

years in software engineering

2.5bn

financial records migrated to Oracle

40+

Java apps on zero-touch release orchestration

100k+

concurrent users on a Kafka/Vert.x platform

## Core skills

|                         |                                                                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DevSecOps & CI/CD       | CloudBees CI (expert), CloudBees CD/RO (expert), Jenkins, SAST / DAST / SCA gates, SBOM & supply-chain security, Policy as code, Platform engineering (golden paths), Secure SDLC, Ansible Automation Platform, Docker, Kubernetes, Linux, HashiCorp Vault |
| Backend                 | Java 8–21, Spring Boot / Security / Web, Vert.x, REST, GraphQL                                                                                                                                                                                             |
| Architecture            | Microservices, Event-driven / CQRS, Apache Kafka, Hazelcast clustering                                                                                                                                                                                     |
| AI-assisted engineering | Claude Code, OpenAI Codex, Devin, Governed agentic workflows, AI-assisted code review                                                                                                                                                                      |
| Cloud & Data            | AWS (EC2), Google Cloud Platform, Oracle, PostgreSQL, SQL tuning & partitioning                                                                                                                                                                            |
| Ways of working         | Technical leadership & mentoring, DevSecOps coaching, Standards & enterprise-pattern adoption                                                                                                                                                              |
| Governance & compliance | DORA (EU Digital Operational Resilience Act), Deployment governance                                                                                                                                                                                        |

## Experience

**DevSecOps Architect (Customer Success Architect), SWIFT** · Brussels, Belgium · Consultant Jan 2025 – Present  
*Returned to SWIFT in 2025 for the DevOps Engineering Services organisation: a regulated, multi-squad platform behind global secure financial messaging.*

- Onboarded 40+ Java applications onto the centralised Release Orchestration platform (CloudBees CD/RO), zero-touch from commit to production; my team delivered 80%+ of the company KPI for 100% zero-touch.
- Designed the CI/CD blueprints (golden paths) every onboarded squad ships through; coached 5+ squads as DevSecOps solutions architect and technical reference for secure delivery, enterprise patterns and standards.
- Built 20+ orchestrated-patching pipelines covering 300+ VMs, cutting patching time by 40% and making patch cycles repeatable enough that teams trust them; core of the company KPI for 100% orchestrated VM patching.
- Integrated SAST/DAST scanning into the standard pipelines of several critical applications, turning security findings into enforced gates in the secure SDLC.
- Added SBOM generation and policy-as-code guardrails to the standard pipelines, giving supply-chain visibility and enforceable controls aligned with DORA's ICT-risk and resilience requirements.
- Built the automation and internal tooling in Java, Node.js and shell that improved developer experience, pipeline reliability and day-to-day operational efficiency.
- Set the governance discipline for coding-agent work, scoped tasks, human review and the same security gates as human-written code, and shipped agent-first with Claude Code, OpenAI Codex and Devin.

- Led the migration of a 2.5 billion-record financial database to Oracle, preserving data integrity and business continuity throughout.

- Spearheaded the migration of the Identity Management monolith to a microservices architecture, keeping the service live for users throughout the transition.
- Owned the container strategy for two squads as Docker champion, building and hardening the images and keeping them aligned with security and tooling standards.

- Designed from scratch a cloud-native, clustered CQRS/event-driven microservices backend on Vert.x, built for high throughput and low latency.
- Ran the platform on Kubernetes and GCP, supporting hundreds of thousands of concurrent interactions, with Prometheus/Grafana monitoring for availability.
- Designed the CI/CD pipelines (CircleCI to GCP) the team shipped through.

## Open frameworks & writing

Frameworks published under Techstream, my consultancy — [github.com/sotille](https://github.com/sotille).  
[Release Orchestration Framework](#) — deployment governance and controlled delivery across environments  
[Software Supply Chain Security Framework](#) — dependencies, build systems, artifacts and deployment environments  
[AI DevSecOps Framework](#) — securing AI-assisted and agentic software delivery

## What colleagues say

“He does not merely automate tasks; he engineers repeatable, resilient delivery systems that improve deployment reliability, enforce secure coding standards and reduce operational risk.”  
— Anastasios Lagos, DevSecOps Engineer, Mindwave (SWIFT programme), 2026

“Probably the most skilled developer I have ever met. Enthusiastic about new technologies and making things work.”  
— Arnau Rovira, DevOps Engineer, Eleven Sports
